

# Artificial Intelligence (AI) and Human Designer Research Experience in Singapore (June 22–July 18, 2026)

Sponsored by the NSF International Research Experience for Students Program (IRES)

## Human Designer in AI:

*“How can designers and AI work together to boost performance at the individual and team levels?”*

### Multi-Disciplinary Research:

Selected students will explore the challenges and possibilities related to integrating AI into the project design phase in a research-driven approach.

### Research in an International Environment:

Students will conduct high-quality research and engage in research-related activities abroad in collaboration with scholars from Singapore.

### Multi-University and International Mentorship:

Students will be mentored throughout the project by researchers from Georgia Tech, University of Texas Arlington, Nanyang Technological University (NTU), and National University of Singapore (NUS).

### Professional Development:

Students will be involved in a unique program aiming at bolstering their professional development, fulfilling their intercultural curiosity, and inspiring them to pursue a scientific career
